## THERMIQUE WINS AGAIN!

---

### NEXT GENERATION OF THERMIQUE TOWEL WARMER EARNS PLATINUM AWARD FOR DESIGN EXCELLENCE

**CHICAGO, III. (Sept. 2, 2008)** — The new freestanding Thermique Heated Glass Towel Warmer has earned the 2008 *Design Journal* ADEX Award for Design Excellence. This is the second platinum ADEX Award for Thermique Technologies, the world leader in designing and manufacturing heated glass appliances.

Design Journal's annual ADEX Awards recognize superior product design of furniture and building materials marketed to the design trade. The new Thermique Towel Warmer features heated glass in a freestanding design, a first in the industry. Heated glass is a more attractive and efficient heating element than the traditional radiator devices used in other towel warmers. With a freestanding design, Thermique Towel Warmers require no professional installation or wall space.

Thermique is the first company to offer designer colors for towel warmers, transforming a utilitarian appliance into a versatile design element. These freestanding towel warmers are the perfect accent or centerpiece of the bathroom décor. The first colors to be introduced are white, black, and cream, with additional colors to be announced throughout the year.

"Hats off to you and your entire organization, especially your research and development department and marketing team, for designing and marketing such outstanding products," said John Moses, publisher of *Design Journal*.

Thermique Towel Warmers are ideal for upscale homes, luxury hotels, bed & breakfasts, and professional day spas. The freestanding Thermique Towel Warmer is UL® approved for bathrooms and other "wet" environments with a GFCI wall outlet or in dry environments with an ordinary wall outlet.

#### **About Thermique Technologies, LLC**

Thermique Technologies, LLC, is the global leader in the development and sophisticated application of heated glass technology. From its architectural heated glass to its heated glass towel warmers, Thermique's patented technology enables glass to be used in ways never before imagined.
